

Transform your Kyocera MFP with HyPAS-enabled Applications

HyPAS™

Hybrid Platform for Advanced Solutions

Kyocera's HyPAS (Hybrid Platform for Advanced Solutions), a powerful and scalable software solution platform, optimizes the performance of Kyocera's award-winning MFPs through custom, integrated software applications that are designed to meet and exceed users specific document imaging needs. HyPAS will transform your Kyocera MFP into a resource designed to evolve as your business evolves – resulting in enhanced information sharing, resource optimization and an improved pre-existing, as well as future document workflows.

Kyocera's HyPAS platform provides a number of benefits, including:

Message Details: HyPAS Applications

Benefits to End-Users:

Enables integration of the most advanced solutions, personalized to an organization's document imaging requirements by enhancing the overall functionality of their Kyocera MFP and improving the productivity and efficiency of its staff.

Benefits to Business Managers and CFOs:

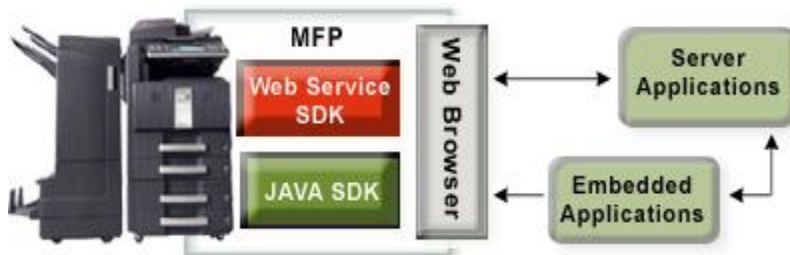

More fully optimized document imaging devices, resulting in a lower cost of operation and more immediate Return on your investment

Benefits to IT Department:

Seamless integration of Kyocera MFPs with existing network systems, maintaining the integrity and security of not only the user's documents, but also the network & document imaging device itself.

Kyocera's Unique HyPAS Platform

Kyocera's HyPAS is unique in that it offers both Java-based and Web Services-based Software Development Kits (SDKs), providing a more open and flexible platform; enabling advanced integration with systems that are already implemented in the enterprise.

HyPAS-Enabled Devices:

Select Kyocera MFPs have the capability to use HyPAS technology for the development and integration of strategic business solutions, including the [TASKalfa 520i / CS 520i](#), [TASKalfa 420i / CS 420i](#), [TASKalfa](#)

[500ci / CS 500ci](#), [TASKalfa 400ci / CS 400ci](#), [TASKalfa 300ci / CS 300ci](#) and [TASKalfa 250ci / CS 250ci](#). Certain HyPAS applications are backward compatible with select Kyocera MFPs including [KM-5050 / CS-5050](#), [KM-4050 / CS-4050](#), [KM-3060 / CS-3060](#) and [KM-2560 / CS-2560](#).

Please go to the each application page to see a full compatibility list.

Utilizing Two key Technologies

Java™, a programming language that is commonly used for mobile applications, such as cell-phones, provides the capability to embed features and applications within the document imaging device itself. By embedding Java applications within Kyocera MFPs, an existing feature set can be extended with more advanced, feature-rich, server-less capabilities, delivering seamless integration and advanced control capability. Using Java programming language, the Kyocera MFP can communicate with custom or proprietary applications and also with Web Services enabled applications.

By adopting industry standard protocols such as SOAP/XML, HyPAS Web Services offers programmers a developer-friendly environment. Web Service applications provide system integrators with flexibility and interoperability because they can be implemented on a wide range of platforms and using almost any programming language. In addition, using Web Services SDKs, Kyocera MFPs can communicate with other advanced hardware devices which are Web Services - enabled devices such as Apple's iPhone or iPod Touch.

By combining these two technologies, HyPAS delivers expanded versatility and capability to companies and its staff, allowing for the quick delivery of solutions to market that seamlessly integrate with select Kyocera MFPs.

Kyocera's Suites of HyPAS – enabled applications are:

[ColorLock & AccessLock](#)

Organizations can have better control at the device level to manage color usage and access to the specific device functions.

[Capture2go](#)

Available free via the Apple AppStore on iTunes, users can scan documents for review and distribution on their iPhone.

[KYOcapture powered by AutoStore](#)

Kyocera's Solution to Capture, Process and Route your Content

[PrintQ Manager Secure Print Release](#)

Enables Windows™ users more advanced print management and security benefits

[PanelPlus Scan Panel Customization for TASKalfa / CS 500ci Series](#)

A HyPAS-enabled panel customization tool for dealers

[Equitrac](#)

Embedded Equitrac solution provides simplified print-copy tracking and cost recovery

[Open Text Fax Server, RightFax Edition](#)

Kyocera offers advanced integration with RightFAX; giving users the ability to scan/send documents via the RightFAX server.

To learn more about HyPAS and requesting HyPAS enabled applications and integration, please contact your local network solutions manager or contact software solutions.

PanelPlus Scan Device Panel Customization Tool

Kyocera's PanelPlus, only available through Kyocera dealers, is a unique software tool that allows Kyocera authorized dealers to develop and deploy custom operation panel interfaces for end-user customers, as well as integrating assigned settings to automate scanning tasks or workflows

As organizations seek to enhance workplace productivity, PanelPlus will boost performance via task-focused, pre-programmed "One-Touch" Buttons for Scan to E-Mail, Scan to SMB (PC) or Scan to FTP destinations for a more streamlined environment.

Benefits of PanelPlus for dealers are:

Custom Panel as a differentiator

- Create customized GUIs for your customers

Revenue opportunities

- Panel customization can be added to a dealer's professional services offering

Customer retention

- Closer interaction with the customer builds and develops customer loyalty and will allow your dealership to uncover potential targets for new solutions or products

Expand solution capability within a dealership

- PanelPlus is easy to use and does not require special training

Benefits for end-users include:

Simplifies scanning process

- Reduce and simplify complex scanning tasks
- Only the settings that the user needs are displayed

Ensures compliance

- Destination and settings are pre-defined
- Errors are minimized with pre-defined settings

Tailored to the user's requirements

- Scan tasks can be customized as required based on user's requirements

With PanelPlus you can position your dealership as a true solution provider. For more complex scanning workflows which require indexing or advanced processing, KYOCapture or KYOCapture Express solutions are available.

PrintQ Manager Secure Print Release (HyPAS enabled)

Kyocera's PrintQ Manager Secure Print Release allows users to access their secured documents stored at a server and brings advanced print management and security to Windows users. With the addition of HyPAS integration, print controls and security features are further enhanced.

PrintQ integration Includes:

- Print authentication and authorization management using Active Directory
- Interactive, easy to navigate user interface
- Display a list of your print jobs on device panel
- Reporting capability includes tracking print use by job, user and device
- HID card authentication support

Equitrac Integration (HyPAS enabled)

Equitrac is a world leader in intelligent print tracking and cost recovery solutions. Kyocera offers advanced integration with both Equitrac Office® and Equitrac Express® products. Kyocera's embedded Equitrac solution is the result of industry leaders working together to streamline your workflow and help you realize your full cost management potential. Seamlessly integrated with Kyocera's customizable development platform, HyPAS, Kyocera's embedded Equitrac solution delivers unprecedented convenience, security, productivity and of course, cost savings.

Equitrac integration includes:

- Interactive, easy to navigate user interface
- Authentication and authorization from select Kyocera MFPs
- Follow-You Printing® for mobile and secure document release
- Mag stripe, Mifare®, Legic and HID card reader support
- Interactive user interface with Equitrac server application

Open Text Fax Server, RightFax Edition (HyPAS enabled)

Kyocera offers advanced HyPAS integration with RightFax. Scan and send documents to the RightFax server directly from select Kyocera MFPs. Through the effective use of existing resources, you can improve security and compliance standards while significantly reducing operating costs.

RightFax integration includes:

- Interactive, easy to navigate user interface
- Send documents to RightFax server from HyPAS-enabled device
- Walk up fax machine capability
- Authenticated fax capability
 - User address book accessibility for faxing to multiple destinations with ease
 - Store a user-specific cover page for an added professional touch
- Delay send feature allows you to set a specific date and time to fax
